

Github

▼ Clone & Update

▼ Repo

- **git clone** url or **clone VSC**
- **git init**: create empty repository local (if u wanna create from local, then upload to github)

▼ Update

- **git fetch**: follow commit others and no sync.
- **git pull**

▼ Push code

- **git add .**
- **git commit -m "comment"**
- **git push**

▼ Branch for PR

- Ur owner/ contributor & wanna create branch for other people PR (for public repo)

▼ How

- **git branch name_branch**
- switch branch: **git checkout name_branch** or **VS**
- **git merge** (in main/master branch) or **PR in Github**

▼ Pull Request

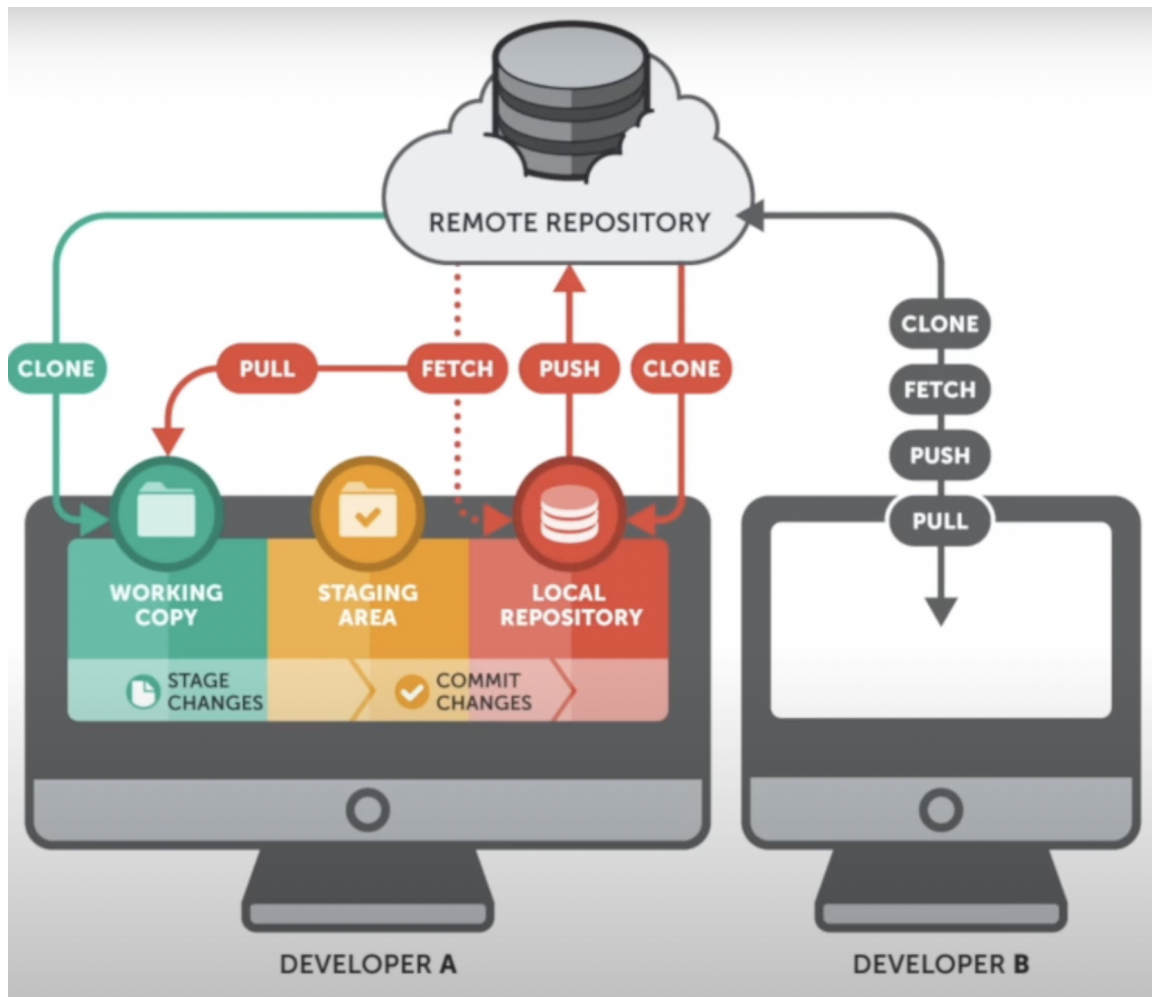

- Ur other people wanna contribute for repo → create PR to owner/ contributor, then they will check and merge branch (if good)

▼ How

- **fork** original repo in my github → clone locally from my github (Mac)
- **Edit**

- `git add .`
- `git commit -m "comment"`
- `git push`
- Go to **repo fork** in my github → **Create PR**

▼ Other

▼ Configure username/email

- `git config --global user.name "Charles"`
- `git config --global user.email "tuanleducanh78202@gmail.com"`

▼ Check

- `git log`
- `git status`
